

**TPS22908** 

SLVSBI7C -JULY 2012-REVISED APRIL 2015

# TPS22908 3.6-V, 1-A, 28-mΩ On-Resistance Load Switch with Controlled Rise Time

#### Features

- Integrated P-Channel Load Switch
- Input Voltage: 1 V to 3.6 V
- 1 A Maximum Continuous Switch Current
- On-Resistance (Typical Values)
  - R<sub>ON</sub> = 28 m $\Omega$  at V<sub>IN</sub> = 3.6 V
  - R<sub>ON</sub> = 33 mΩ at V<sub>IN</sub> = 2.5 V
  - R<sub>ON</sub> = 42 m $\Omega$  at V<sub>IN</sub> = 1.8 V
  - R<sub>ON</sub> = 70 m $\Omega$  at V<sub>IN</sub> = 1.2 V
- Maximum Quiescent Current = 1 μA
- Maximum Shutdown Current = 1 µA
- Low Control Input Thresholds Enable Use of 1.2-V, 1.8-V, 2.5-V, and 3.3-V Logic
- Controlled Slew Rate to Avoid Inrush Currents
  - $t_R = 105 \,\mu s$  at  $V_{IN} = 3.6 V$
- Four Terminal Wafer-Chip-Scale Package (WCSP)
  - Nominal Dimensions See Addendum for **Details**
  - 0.9 mm × 0.9 mm, 0.5-mm Pitch, 0.6-mm Height
- Quick Output Discharge (QOD)

# 2 Applications

- **Battery Powered Equipment**
- Portable Industrial Equipment
- Portable Medical Equipment
- Portable Media Players
- Point of Sale Terminal
- **GPS Devices**
- **Digital Cameras**
- Portable Instrumentation
- Smartphones and Tablets

# 3 Description

The TPS22908 is a small, low RON load switch with controlled turn on. The device contains a P-channel MOSFET that operates over an input voltage range of 1 V to 3.6 V. The switch is controlled by an on/off input (ON), which is capable of interfacing directly with low-voltage control signals.

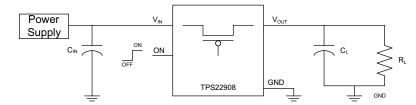

The TPS22908 is available in a space-saving 4terminal WCSP with 0.5 mm pitch (YZT). The device is characterized for operation over the free-air temperature range of -40°C to 85°C.

#### Device Information<sup>(1)</sup>

|             |           | -               |
|-------------|-----------|-----------------|
| PART NUMBER | PACKAGE   | BODY SIZE (NOM) |
| TPS22908    | DSBGA (4) | 0.9mm x 0.9mm   |

(1) For all available packages, see the orderable addendum at the end of the datasheet.

# 5 Device Options

| FEATURE                               | VALUE       |
|---------------------------------------|-------------|
| Device                                | TPS22908    |
| R <sub>ON</sub> (Typical) VIN = 3.6 V | 28 mΩ       |
| Rise Time (Typical) VIN = 3.6 V       | 105 μs      |
| Quick Output Discharge (1)            | Yes         |
| Maximum Current                       | 1 A         |
| Enable                                | Active high |

(1) This feature discharges the output of the switch to ground through an  $80-\Omega$  resistor, preventing the output from floating.

# 6 Pin Configuration and Functions

#### **Pin Functions**

|     | PIN              | 1/0 | DESCRIPTION  |  |  |
|-----|------------------|-----|--|--|--|
| NO. | NAME             | 1/0 | DESCRIPTION  |  |  |
| A1  | V <sub>OUT</sub> | 0   | Switch Output  |  |  |
| A2  | V <sub>IN</sub>  | I   | vitch input, bypass capacitor recommended for minimizing V <sub>IN</sub> dip. See <i>Application Information</i> . |  |  |
| B1  | GND              | _   | ound   |  |  |
| B2  | ON               | ı   | Switch control input, active high. Do not leave floating.  |  |  |

# 7 Specifications

### 7.1 Absolute Maximum Ratings

Over operating free-air temperature range (unless otherwise noted)<sup>(1)</sup>

|                   |   | MIN  | MAX              | UNIT <sup>(2)</sup> |  |
|-------------------|---|------|------------------|---------------------|--|
| $V_{IN}$          | Supply voltage  | -0.3 | 4                | V                   |  |
| $V_{OUT}$         | Output voltage  | -0.3 | $(V_{IN} + 0.3)$ | V                   |  |
| $V_{ON}$          | Input voltage   | -0.3 | 4                | V                   |  |
|                   | Maximum Continuous Switch Current for V <sub>IN</sub> ≥ 1.2 V |      | 1                |                     |  |
| I <sub>MAX</sub>  | Maximum Continuous Switch Current at V <sub>IN</sub> = 1 V    |      | 0.6              | Α                   |  |
| T <sub>J</sub>    | Maximum junction temperature <sup>(3)</sup>                   |      | 125              | °C                  |  |
| T <sub>LEAD</sub> | Maximum lead temperature (10-s soldering time)                |      | 300              | °C                  |  |
| T <sub>STG</sub>  | Storage temperature   | -65  | 150              | °C                  |  |

<sup>(1)</sup> Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under Recommended Operating Conditions. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

(2) All voltage values are with respect to network ground terminal.

# 7.2 ESD Ratings

|                    |                         |   | VALUE | UNIT |
|--------------------|-------------------------|---|-------|------|
|                    |                         | Human body model (HBM), per ANSI/ESDA/JEDEC JS-001 (1)              | ±2000 |      |
| V <sub>(ESD)</sub> | Electrostatic discharge | Charged-device model (CDM), per JEDEC specification JESD22-C101 (2) | ±1000 | V    |

<sup>(1)</sup> JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.

### 7.3 Recommended Operating Conditions

|                 |                                      | MIN              | MAX      | UNIT |
|-----------------|--------------------------------------|------------------|----------|------|
| V <sub>IN</sub> | Input voltage                        | 1                | 3.6      | V    |
| $V_{ON}$        | ON voltage                           | 0                | 3.6      | V    |
| $V_{OUT}$       | Output voltage                       | 0                | $V_{IN}$ | V    |
| $V_{IH}$        | High-level input voltage, ON         | 0.85             | 3.6      | V    |
| $V_{IL}$        | Low-level input voltage, ON          | 0                | 0.4      | V    |
| $T_A$           | Operating free-air temperature range | -40              | 85       | °C   |
| C <sub>IN</sub> | Input capacitor                      | 1 <sup>(1)</sup> |          | μF   |

<sup>(1)</sup> Refer to application section.

# 7.4 Thermal Information

|                      |  | TPS22908    |      |
|----------------------|--|-------------|------|
|                      | THERMAL METRIC <sup>(1)</sup>                | YZT (DSBGA) | UNIT |
|                      |  | 4 PINS      |      |
| $R_{\theta JA}$      | Junction-to-ambient thermal resistance       | 188         |      |
| $R_{\theta JC(top)}$ | Junction-to-case (top) thermal resistance    | 2           |      |
| $R_{\theta JB}$      | Junction-to-board thermal resistance         | 33          | °C/W |
| $\Psi_{JT}$          | Junction-to-top characterization parameter   | 9.1         |      |
| ΨЈВ                  | Junction-to-board characterization parameter | 33          |      |

(1) For more information about traditional and new thermal metrics, see the IC Package Thermal Metrics application report, SPRA953.

<sup>(3)</sup> In applications where high power dissipation and/or poor package thermal resistance is present, the maximum ambient temperature may have to be derated. Maximum ambient temperature [TA(max)] is dependent on the maximum operating junction temperature [T $_{J(max)}$ ], the maximum power dissipation of the device in the application [P $_{D(max)}$ ], and the junction-to-ambient thermal resistance of the part/package in the application (R $_{\theta JA}$ ), as given by the following equation:  $T_{A(max)} = T_{J(max)} - (R_{\theta JA} \times P_{D(max)})$ 

<sup>(2)</sup> JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

# 7.5 Electrical Characteristics

Unless otherwise noted the specification applies over the operating ambient temp  $-40^{\circ}\text{C} \le T_{A} \le 85^{\circ}\text{C}$ . Typical values are for  $V_{IN} = 3.6 \text{ V}$ , and  $T_{A} = 25^{\circ}\text{C}$  unless otherwise noted.

 $t_{\text{ON}}/t_{\text{OFF}} \text{ WAVEFORMS}$ 

A. Rise and fall times of the control signal is 100 ns.

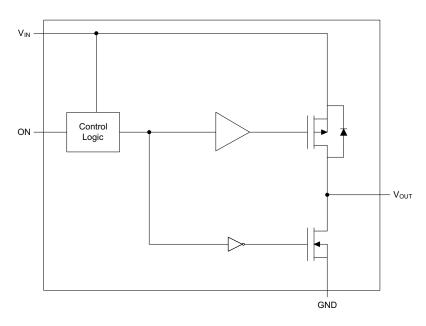

Figure 29. Test Circuit and  $t_{\text{ON}}/t_{\text{OFF}}$  Waveforms

# 9 Detailed Description

#### 9.1 Overview

The TPS22908 is a single channel, 1 A load switch in a small, space-saving DSBGA-4 package. This device implements a P-channel MOSFET to provide a low on-resistance for a low voltage drop across the device. A controlled rise time is used in applications to limit the inrush current.

### 9.2 Functional Block Diagram

### 9.3 Feature Description

#### 9.3.1 ON/OFF Control

The ON pin controls the state of the switch. Activating ON continuously holds the switch in the on state. ON is active high and has a low threshold making it capable of interfacing with low-voltage signals. The ON pin is compatible with standard GPIO logic threshold, and it can be used with any microcontroller with 1.2-V, 1.8-V, 2.5-V or 3.3-V GPIOs.

### 9.3.2 Quick Output Discharge

The TPS22908 includes the Quick Output Discharge (QOD) feature. When the switch is disabled, a discharge resistance with a typical value of 80  $\Omega$  is connected between the output and ground. This resistance pulls down the output and prevents it from floating when the device is disabled.

# 9.4 Device Functional Modes

**Table 1. Functional Table** 

| ON | V <sub>IN</sub> to V <sub>OUT</sub> | V <sub>OUT</sub> to GND |
|----|-------------------------------------|-------------------------|
| L  | OFF                                 | ON                      |
| Н  | ON                                  | OFF                     |

# 10 Application and Implementation

#### NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

### 10.1 Application Information

### 10.1.1 Input Capacitor (Optional)

To limit the voltage drop on the input supply caused by transient inrush currents when the switch turns on into a discharged load capacitor, a capacitor can be placed between  $V_{IN}$  and GND. A 1  $\mu$ F ceramic capacitor,  $C_{IN}$ , placed close to the pins, is usually sufficient. Higher values of  $C_{IN}$  can be used to further reduce the voltage drop during high-current application. When switching heavy loads, it is recommended to have an input capacitor about 10 times higher than the output capacitor to avoid excessive voltage drop.

#### 10.1.2 Output Capacitor (Optional)

Due to the integrated body diode of the PMOS switch, a  $C_{IN}$  greater than  $C_L$  is highly recommended. A  $C_L$  greater than  $C_{IN}$  can cause  $V_{OUT}$  to exceed  $V_{IN}$  when the system supply is removed. This could result in current flow through the body diode from  $V_{OUT}$  to  $V_{IN}$ . A  $C_{IN}$  to  $C_L$  ratio of at least 10 to 1 is recommended for minimizing  $V_{IN}$  dip caused by inrush currents during startup; however, a 10 to 1 ratio for capacitance is not required for proper functionality of the device. A ratio smaller than 10 to 1 (such as 1 to 1) could cause slightly more  $V_{IN}$  dip at turn on due to inrush currents.

### 10.2 Typical Application

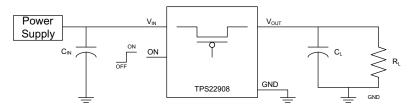

Figure 30. Typical Application Schematic

#### 10.2.1 Design Requirements

The following input parameters will be used in these design examples.

**Table 2. Design Parameters** 

| DESIGN PARAMETER       | EXAMPLE VALUE |  |  |  |  |
|------------------------|---------------|--|--|--|--|
| V <sub>IN</sub>        | 1.8 V         |  |  |  |  |
| C <sub>L</sub>         | 10 μF         |  |  |  |  |
| Load current           | 500 mA        |  |  |  |  |
| Ambient Temperature    | 25 °C         |  |  |  |  |
| Maximum inrush current | 200 mA        |  |  |  |  |

# 10.2.2 Detailed Design Procedure

#### 10.2.2.1 Managing Inrush Current

When the switch is enabled, the output capacitors must be charged up from 0 V to the set value (1.8 V in this example). This charge arrives in the form of inrush current. Inrush current can be calculated using Equation 1:

$$I_{INRUSH} = C_L \times \frac{dV_{OUT}}{dt}$$

where:

• C<sub>L</sub> = Output capacitance

dV<sub>OUT</sub> = Output voltage

The TPS22908 offers a controlled rise time for minimizing inrush current. This device can be selected based upon the minimum acceptable rise time which can be calculated using the design requirements and the inrush current equation. An output capacitance of 4.7  $\mu$ F will be used since the amount of inrush current increases with output capacitance:

$$200 \text{ mA} = 10 \mu F \times 1.8 \text{V} / \text{dt}$$

$$dt = 90 \ \mu s \tag{2}$$

To ensure an inrush current of less than 200 mA, a device with a rise time greater than 90 µs must be used. The TPS22908 has a typical rise time of 160 µs at 1.8 V which meets the above design requirements.

#### 10.2.2.2 VIN to VOUT Voltage Drop

The voltage drop from VIN to VOUT is determined by the ON-resistance of the device and the load current. R<sub>ON</sub> can be found in *Electrical Characteristics* and is dependent on temperature. When the value of R<sub>ON</sub> is found, the following equation can be used to calculate the voltage drop across the device:

$$\Delta V = I_{LOAD} \times R_{ON}$$

where:

- ΔV = Voltage drop across the device
- I<sub>LOAD</sub> = Load current

At  $V_{IN}$  = 1.8 V, the TPS22908 has an  $R_{ON}$  value of 42 m $\Omega$ . Using this value and the defined load current, the above equation can be evaluated:

Product Folder Links: TPS22908

$$\Delta V = 500 \text{ mA} \times 42 \text{ m}\Omega$$

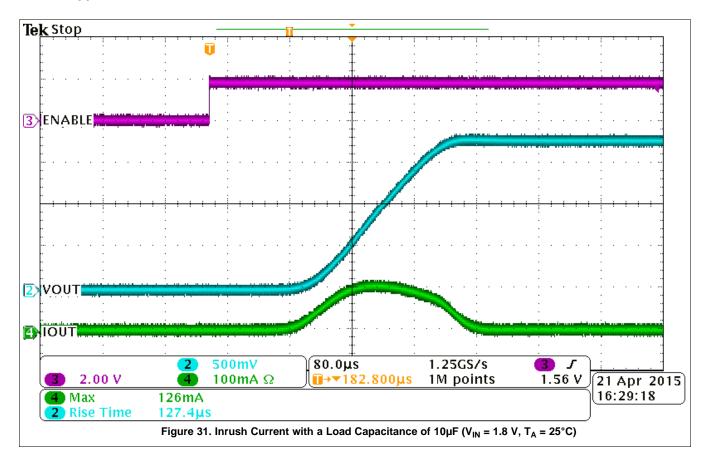

$$\Delta V = 21 \text{ mV} \tag{4}$$

Therefore, the voltage drop across the device will be 21 mV.

Submit Documentation Feedback

### 10.2.3 Application Curve

# 11 Power Supply Recommendations

The device is designed to operate with a VIN range of 1 V to 3.6 V. This supply must be well regulated and placed as close to the device terminals as possible. It must also be able to withstand all transient and load currents, using a recommended input capacitance of 1  $\mu F$  if necessary. If the supply is located more than a few inches from the device terminals, additional bulk capacitance may be required in addition to the ceramic bypass capacitors. If additional bulk capacitance is required, an electrolytic, tantalum, or ceramic capacitor of 10  $\mu F$  may be sufficient.

# 12 Layout

#### 12.1 Layout Guidelines

For best performance, VIN, VOUT, and GND traces should be as short and wide as possible to help minimize the parasitic electrical effects. To be most effective, the input and output capacitors should be placed close to the device to minimize the effects that parasitic trace inductances may have on normal operation.

### 12.2 Layout Example

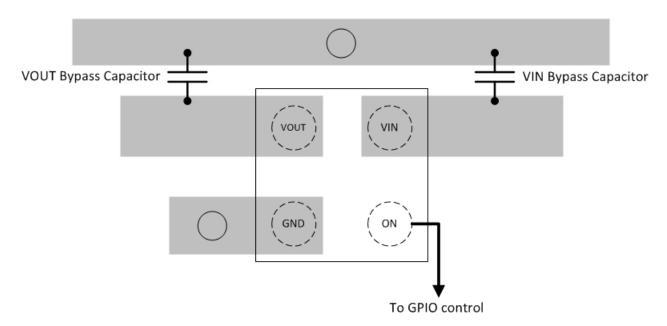

Figure 32. Layout Example

### 12.3 Thermal Considerations

For higher reliability, the maximum IC junction temperature,  $T_{J(max)}$ , should be restricted to 125°C under normal operating conditions. Junction temperature is directly proportional to power dissipation in the device and the two are related by:

$$T_J = T_A + R_{\theta JA} \times P_D$$

#### where:

- T<sub>1</sub> = Junction temperature of the device
- T<sub>A</sub> = Ambient temperature
- P<sub>D</sub> = Power dissipation inside the device
- R<sub>BJA</sub> = Junction to ambient thermal resistance. See *Thermal Information* for more information. This parameter is highly dependent on board layout.

| TPS22908YZTT     | ACTIVE | DSBGA        | YZT                | 4    | 250            | Green (RoHS<br>& no Sb/Br) | SNAGCU           | Level-1-260C-UNLIM | -40 to 85    | (AT ~ ATF)           | Samples |

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details.

**TBD:** The Pb-Free/Green conversion plan has not been defined.

**Pb-Free (RoHS):** TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

**Pb-Free (RoHS Exempt):** This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

- (3) MSL, Peak Temp. The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.
- (4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.
- (5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.
- (6) Lead/Ball Finish Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

#### IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have *not* been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
